Volume 28

Aase, K.K., Contingent claims valuation when the security price is a combination of an Ito process and a random point process (2) 185–220
Brockwell, P.J. and R.A. Davis, Simple consistent estimation of the coefficients of a linear filter (1) 47– 59
Cattiaux, P., Time reversal of diffusion processes with a boundary condition (2) 275–292
Cerrito, P.B., Markov chains on completely regular semigroups (1) 23– 30
Csörgő, M. and L. Horváth, A note on strong approximations of multivariate empirical processes (1) 101–109
Dagsvik, J.K., Markov chains generated by maximizing components of multidimensional extremal processes (1) 31– 45
Davis, R.A., *see* P.J. Brockwell (1) 47– 59
Dijk, N.M. van, On the finite horizon Bellman equation for controlled Markov jump models with unbounded characteristics: Existence and approximation (1) 141–157
Divanji, G., *see* R. Vasudeva (2) 293–300
Fahrmeir, L., A note on asymptotic testing theory for nonhomogeneous observations (2) 267–273
Glynn, P.W. and D.L. Iglehart, A new class of strongly consistent variance estimators for steady-state simulations (1) 71– 80
Hlynka, M. and J.N. Sheahan, The secretary problem for a random walk (2) 317–325
Horváth, L., *see* M. Csörgő (1) 101–109
Hüsler, J. and M. Schüpbach, Limit results for maxima in non-stationary multivariate Gaussian sequences (1) 91– 99
Iglehart, D.L., *see* P.W. Glynn (1) 71– 80
Kallenberg, O., One-dimensional uniqueness and convergence criteria for exchangeable processes (2) 159–183
Liggett, T.M. and S.C. Port, Systems of independent Markov chains (1) 1– 22
Lloyd, C.J. and E.J. Williams, Recursive splitting of an interval when the proportions are identical and independent random variables (1) 111–122
McKeague, I.W., A counting process approach to the regression analysis of grouped survival data (2) 221–239
